

LED500 PRO SERIES

Pro Series LED Panels from Dracast are a flagship model in our catalog that stand the test of time in both features as well as durability and quality. Pro Series panels are used by industry professionals around the world in both studio and field applications.

Dracast Pro Series Panels are available in three sizes: the LED500, LED1000, and LED2000. The LED500 is a 12"x 6" rectangular panel light with an ultra-compact and portable form-factor that make it suitable for a large variety of applications. The LED1000 is a more familiar, traditional 12"x 12" panel, while LED2000, at 24" x 15", is built for studios and other settings where very high output is a must.

Like the Dracast Plus Series, the Pro Series is available in three color temperature models: 3200K, 5600K, and 3200K - 5600K (Variable CCT). All three versions deliver continuous 0 - 100% dimming and >95+ CRI (color rendition) across the color spectrum. Additionally, Pro Series lights can be battery powered for field work and generate little to no heat, making them ideal when portability is a must.

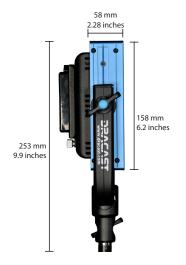

Dracast Pro Series light are also some of the most durable LED lights available, being built entirely on an anodized aluminum frame and chassis. They are truly built for use by lighting professionals who plan to put them to the test again and again.
