

High 500mW Output Power

The 600Mhz processor delivers Faster Response times

Capable of up to 125Mbit aggregate throughput

Supports Dual Band 2.4Ghz / 5Ghz Wi-Fi Frequencies

User Friendly proprietary Browser-based Interface

DC Power, 12 volts (Cable Included)

Weather Resistant enclosure

Powerful Dual Band Omni-Directional Antenna

Longer Range than Rogue devices

# EC-ER DB

Wave WiFi's EC-ER DB is our solution to Dual Band needs on medium sized vessels (50-65ft). The EC-ER DB can be directly connected to any WAN ethernet enabled device, router or switch resulting in flawless performance as a standalone system or integrated into the vessel's network. The EC-ER DB is connected to a powerful Dual Band Omni-Directional antenna giving the system an incredible amount of range. The system is a more affordable in-between solution than our more powerful EC-HP DB AC and shorter range Rogue systems. While there is no software to be installed, the system comes with a user-friendly browser-based interface.

The EC-ER DB kit contains a Quick Start guide, 25ft of CAT5e Ethernet cabling, a 10ft DC 12V power cable, 25ft of low-loss antenna cabling with a spare Male "N" connector and a Dual Band Omni-Directional N-Female antenna.

Enjoy the luxury of Wi-Fi on the water how it was intended to be.
