## 2. INTRODUCTION

HDM-C6IP-SET, HDMI extender set is designed to extend your HD display with the resolutions of 1080p/60Hz up to 330 feet (100 meters) away from your HDMI or DVI-D source. Thanks to the use of the TCP/IP protocol, you can transfer your high-definition video over an existing TCP/IP network. See below three examples:

- A:** The Tx and Rx units can extend 100 meters over a single CAT5/6 cable connection point to point.
- B:** The Tx can be connected to a Gigabit switch to establish a IP address therefore sending 1080p video signals to multiple Rx connected to the Gigabit switch and the HDMI displays.
- C:** Multiple Tx's can be connected to a Managed Gigabit switch with VLAN/IGMP support therefore sending 1080p video signals to Rx connected to the Gigabit switch to show different sources on the HDMI displays.
  - Extends HDMI up to 100m over single CAT5E/6
  - Supports HDMI, EDID, Support HDCP
  - Supports resolution HDTV / 1080Pp/60Hz, Vesa (1920 x 1080)
  - Supporting the point to point transmission function currently which can be expanded to the multi-point to point transmission function.
  - Requires a managed Gigabit switch with VLAN/IGMP support to have a solution with multiple sources (Transmitters). Standard Gigabit switch can only support one transmitter.
  - The managed switch must support port based IEEE 802.1Q VLAN, IGMP, and to allow duplicate IP addresses across the VLAN domains.
  - Each VLAN acts as independent HDMI over IP Channel on the network.
  - Number of Tx and Rx that can be used is dependent on bandwidth of the switch (Recommended Gigabit switch 10/1000).
  - Managed switches can be cascaded up to 3 levels, allowing the farthest display to be located up to 300 meters away from the source device. Each receiver can be located up to 100 meters away.
  - Uses M-JPEG technology to process image compression on a fixed bandwidth.
