

CC6-HCMSHP-KIT

CLEAN COMFORT[®] INDOOR AIR ESSENTIALS

Description

The CC6-HCMSHP-KIT is a residential and light commercial forced air zone control system that allows a single HVAC unit to have up to six separate zones. The system can be expanded to as many as 12 zones by adding 3-zone expansion modules. Intuitive firmware allows the panel to be used with a single-stage, multi-stage, heat pump and dual fuel equipment having up to 3 stages of heating and 2 stages of cooling. Standard heat / cool or heat pump thermostats can be used with the CC6-HCMSHP-KIT along with a choice of two or three-wire zone dampers. Simple slide switch configuration allows for a wide range of system setup and control options best suited for each zoning application.

Standard Features

- 6 zones expandable up to 12
- Auto changeover
- Includes electronic discharge air sensor and 40VA transformer
- Cooling priority or majority wins
- Twenty minute time share option
- LED status indication
- On-board adjustable high and low limits and balance points
- Staging by zone thermostat or adjustable stage timer
- Purge cycle option
- For use with 2 or 3 wire dampers

6 ZONE ZONE CONTROL PANELS

MODEL: CC6-HCMSHP-KIT

Specifications:
