

# SIRCO DC/SIRCO DC ESS

Load break switches for direct current applications  
from 2000 to 3600 A, up to 1500 VDC

sirco\_515\_front.eps

## The solution for

- Energy
- Industry

## Strong points

- High-performance switching
- Design tested in application
- Reduced total cost of ownership

## Conformity to standards

- IEC 60947-3
- GB/T 14048.3
- UL 98B

## Function

SIRCO DC and SIRCO DC ESS units are manual control multipolar load break switches. They provide make and break on load and safety disconnection for all low voltage electrical circuits for direct current applications up to 1500 VDC.

## Advantages

### High-performance switching

SIRCO DC and SIRCO DC ESS load break switches include a patented technology providing 1500 VDC breaking capacity with only 2 poles, with significant power loss reduction. This range covers nominal values from 2000 to 3600 A, 1500 VDC.

### Design tested in application

Designed and tested for numerous direct current applications, with tried-and-tested performance in the most difficult environments.

The arc quenching system provides safe disconnection, arc quenching and quick current interruption.

- Tested against high short-circuit systems with and without fuse protection to provide complete protection for the system above 210 kA.
- Tried-and-tested against severe environmental factors, in particular: "Annex Q level C according to IEC" tested in salt mist, at high temperature and altitude, tested in humidity cycle.

### Reduced total cost of ownership

Developed with a view to reducing costs for the user, the product has improvements that ensure the lowest total cost of ownership.

- Flexible connection configurations enable simple input and output connection, with savings made by not using bridging bars in series.
- The multi-circuit design enables configuration of one 3600 A circuit or two 1600 A circuits for greater flexibility.
- A single design for IEC and UL products provides the same base design for customers with IEC or UL machines.
- A compact solution with reduced footprint and weight improves the durability, while reducing packaging, transport and installation costs.

## General characteristics

- Up to 1500 VDC, 2000 to 3600 A.
- Patented switching technology up to 1500 VDC on 2 poles.
- High short-circuit option available.

## Accessories

### Direct operation handle

Frame size	Handle type	Reference
B7 <sub>DS</sub>	V0	2799 7072

V0 type handle

### Door interlocked external operation handle

#### Use

Door interlocked external operation handles include an escutcheon, are padlockable and must be utilised with an extension shaft.

In a combiner box, located close to the solar cell strings, or located close to the inverter, we recommend to use a door interlocked external handle for its safety features.

#### Example

The locking function of the enclosure in the "ON" position will force the operator to safely disconnect and isolate the solar cell strings prior to any intervention.

Opening the door when the switch is on "ON" position is possible by defeating the locking function using a tool (authorised persons only).

The interlocking function is restored when the door is re-closed.

### Bridging bars

#### Use

The bridging bars will make easy the connection of poles in series or parallel.

Connection diagrams:  
see "Pole series connections".

Rating (A) Frame size	Number of poles of the device in series	Pack	Reference
2000 (UL) / B7ds <sup>(1)</sup>	2	1 piece	1909 0001
up to 3600 / B7ds <sup>(2)</sup>	2		1909 0001

acces\_592.eps

(1) UL B7ds requires 4 pcs (2) IEC B7ds requires 8 pcs

### Auxiliary contact

#### Use

Pre-break and signalisation of position I:

1 to 2 NO/NC auxiliary contacts  
(1 as standard).

Low level auxiliary contacts: please consult us.

#### Connection to the control circuit

By 6.35 mm fast-on terminal.

#### Electrical characteristics

30 000 operations.
